

Electronic devices and lithium batteries

Each passenger is allowed to carry up to 15 electronic devices in either hand baggage or checked baggage and up to 20 spare batteries in hand baggage only. It however is recommended to carry electronic devices with lithium batteries in hand baggage.

Damaged, defective or recalled electronic devices or batteries are not permitted in both hand baggage and checked baggage.

Electronic devices in checked baggage must be completely switched off (not in sleep or hibernation mode) and effectively protected from damage and accidental activation.

To ensure the device is never powered on during its transport, any applications, alarms or pre-set configurations that may activate the device have to be disabled or deactivated.

Lithium batteries

Lithium-ion Wh rating Lithium metal content	Battery in electronic device		Spare batteries (including power banks)	
	Hand baggage	Checked baggage	Hand baggage	Checked baggage
≤ 100 Wh < 2 g	✓	✓	✓	✗
100 - 160 Wh 2 - 8 g	✓ *	✓ *	✓ *	✗
> 160 Wh > 8 g	✗	✗	✗	✗

* Prior permission must be requested via Corendon Contact Center. A maximum of 2 spare batteries exceeding 100 Wh may be carried.

CAUTION: When recharging a device equipped with a lithium battery during the flight, always keep an eye on the device. Remove the plug from the socket once charging is completed. If the device has slipped between the seats, always ask our cabin crew for assistance. Recharging of spare batteries on board the aeroplane is not allowed.

Spare batteries

Spare batteries, including power banks, may be carried in hand baggage only. Batteries must be individually protected so as to prevent short circuits (by placement in original retail packaging or by otherwise insulating the terminals, e.g. by taping over exposed terminals or placing each battery in a separate plastic bag or protective pouch).

Smart bags

For baggage equipped with a lithium battery other than lithium button cells (e.g. smart bags), the battery(ies) must be removable. The battery(ies) must be removed if baggage is to be checked in. The removed battery(ies) must be carried in the cabin as spare battery.

NOTE: Baggage with a non-removable lithium battery exceeding 0.3 g lithium metal or 2.7 Wh is not permitted as hand baggage or checked baggage.

Self-balancing devices

Self-balancing devices (e.g. hoverboards, solo wheels, air wheels, oxboards, e-skates, waveboards) are not permitted, with or without battery.

E-bikes

E-bikes are not permitted, with or without batteries.

E-cigarettes

E-cigarettes (including e-cigars, e-pipes, other personal vaporizers) containing batteries may be carried in hand baggage only, provided they are individually protected.

NOTE: Recharging of these devices and/or batteries on board the aeroplane is not permitted.

Portable medical electronic devices

Portable medical electronic devices such as automated external defibrillators (AED), nebulizers, continuous positive airway pressure (CPAP), etc. containing lithium metal or lithium ion cells or batteries are permitted in checked baggage, hand baggage or on the person of the passenger, subject to the following conditions:

- They must be carried for medical use.
- Batteries and cells must meet all standards of the United Nations Manual of Tests and Criteria.
- Each installed or spare battery must not exceed the following:
 - For lithium ion batteries, a Watt-hour rating of not more than 160 Wh,
 - For lithium metal batteries, a lithium content of not more than 8 grams.
- No more than two spare batteries per passenger, which must be individually protected against short circuit. Spare batteries may be carried in hand baggage only
